## Section 4: Bibliography

4.1 Overview .................................................................................................................. 3

4.2 Acknowledgements ................................................................................................. 3

4.2 Reference Bibliography ........................................................................................... 4

End Reference Bibliography ......................................................................................... 81
4.1 Overview

This section of the report contains an extended bibliography in addition to the references contained in Sections 3 and 5 of this report. The purpose of the bibliography is for use as a reference database for future research, theory, hypothesis formation, and other information. This select bibliography has been compiled on safety and safety culture from a range of sources specific to the Coal Industry and related fields with supporting references drawn from organisational theory derived from psychological, scientific, industrial, and engineering databases accessible by the project team. In total we have compiled just under 1100 references as a data source.

All bibliographies have a limited shelf-life. This one was compiled in January 2005.

4.2 Acknowledgements

The project team wishes to thank Dr Lisa Thomas, School of Behavioural Sciences, The University of Newcastle, for her contributions to the extensive bibliography contained in this section of the report which was compiled by The University of Newcastle Human Factors Group. In addition, the work of the 6 research students; Tom Bellamy, Sue Fielding, Alex Adoni, Rachael Henry, Danielle McMahon, and Alison White is also acknowledged.

Furthermore we wish to acknowledge the financial and material support for this project provided by Coal Services Pty Limited, the Joint Coal Board Health and Safety Trust and the University of Newcastle.
